

Superthrive®

Testimonials and Photos

Helpful Hints

We highly value your feedback and are honored to use your testimonials and photographs in our advertising. Your own words and images will inspire others.

Please tell us your Superthrive® story and its value to your growing. The best testimonials share your own unique experiences.

Some suggested ideas may include:

- How long you have been using Superthrive®
- What types and names of plants you grow
- What treatment regimen works best for you, such as frequency and rate of application
- Photos demonstrating before and after plants have been treated with Superthrive®

Tips from a professional photographer:

- Remove unrelated items from view. The camera sees more than we see.
- You may want to place a light-colored background behind treated plants, such as a white cardboard or sheet.
- When comparing container plants, make sure containers are the same size.
- Frame the image with some space surrounding the plants to show full size.
- Lighting: To prevent glare, take your photos when lighting is at an angle and not directly overhead. This will best showcase your plants.
- For larger plantings such as fields or orchards, a diagonal or overview will provide a terrific shot.

When submitting your photos, please feel free to send several of them. Different angles maybe helpful.

Thank you for your submissions!
